

STOP-Lock two-tiered laptop security system

from **Personal Computing** (393 articles)

A- A+

September 29, 2007 Until now most [laptop](#) security systems have either physically secured the laptop or helped track it down once it's been lost or stolen. The STOP-Lock from security manufacturer Secure-It, Inc. has combined these elements in a laptop [security system](#) which combines a tracking system with a locking mechanism to help deter thieves.

STOP-Lock features a highly-visible small metal plate that attaches securely to the cover of the laptop which, once attached, would take 800 pounds of pressure to remove. The plate is stamped with unique [barcode](#) information that [registers](#) the computer with a national database. A specially engineered lock snaps into the security plate, and a steel cable anchors the notebook to desks, chairs, tables or any other stationary object. As an added layer of security, if the thief does try to tear-off the plate, the gel used to chemically bond the plate to the computer leaves an indelible "[tattoo](#)" containing a toll-free telephone number and a "Stolen Property" warning stamp that makes it nearly impossible for a thief to resell the computer.

Secure-It's STOP-lock

Of course it is not only the loss of hardware that is of concern when a laptop goes missing. "This system will help colleges, universities, government and private industry stem the rip-tide of computer and information theft," said Secure-It President John Themistos. "The problem is costing industry billions of dollars in lost data. STOP-Lock will help end this raid on business and personal files." The STOP-Lock can also be used to secure video [game consoles](#), [televisions](#), DVD players and a range of electronic devices. The STOP-Lock Kit retails for US\$39.95 and includes a STOP-Lock plate, six foot steel cable, a lock with two keys, alcohol prep cleaner, adhesive gel activator and a convenient carrying pouch.
