

STOP Monitor Mobile makes inventory management easy—and provides an excellent return on investment.

It's Easier to Use Your Equipment If You Know Where It Is!

STOP Monitor Asset Management System is the lowest cost, easiest to implement, and most versatile asset tracking system available. With STOP Monitor Asset Tracking, barcodes printed on STOP Security Plates or any other asset tag become the basis of a fully-integrated asset management system.

Wouldn't You Rather Keep Track Than Chase?

Web-based and requiring no installation, STOP Monitor is globally accessible and convenient to use. Administrators can quickly enter equipment information directly online from any location, or for even greater speed and ease, can use a scanner-equipped PDA to instantly collect information. Using the scanner, administrators can inventory equipment on the fly and on the spot—without carrying a laptop. No desktop or mobile management system matches this level of convenience with so much capability and value.

Once STOP Monitor is populated with asset management information, it becomes the hub of a completely integrated system, providing the kind of asset reporting that leads to peace of mind. It can be accessed from any browser and can track loans of equipment and provide automated alerts for late returns. Using STOP Monitor Asset Management System reduces 'equipment drift' and provides a reliable mechanism that facilitates compliance and enables fiduciary accountability.

Don't Stop at the Laptop

STOP Monitor Asset Management System uses the barcodes and serial numbers on all modern equipment as a unique asset identifier in its database.

This means that the system can track STOP Security Plate protected equipment as well as virtually anything else with an asset tag. What this provides is a system capable of protecting not only mobile technology, but every other important asset in your organization.

Inputting your existing information after purchase is just as seamless. Use the STOP Monitor software agent and your information populates the database exactly as if it had been input at the factory.

SECURITY TRACKING OF OFFICE PROPERTY

“Since implementing the STOP solution in 2004, the loss rate of our laptops dropped from an average of three per year to zero.”

- Keith Rickles
Regional IT Manager
Lehigh Cement Southern Division

Easy, Easier... Easiest with Dell

If STOP Monitor Asset Tracking’s web input is easy and scanner-based input makes it easier, purchasing STOP tagged equipment through Dell is the easiest way yet to input your asset data. If you add STOP Security Plate protection to your Dell purchases, STOP Monitor Asset Tracking is included. Free. In addition, all configuration information including model number, service tag number, processor, speed, memory and hard drive are automatically input to STOP Monitor providing protection and inventory management from the moment of your equipment’s arrival.
